Dictionaries in Memory

```python
def add_player(record: dict[str, float], name: str, avg: float) -> None:
    record[name] = avg
    print(f"Added {name}'s average.")

d: dict[str, float] = {"Cobb" : .366, "Ruth": .342}
add_player(d, "Gehrig", .340)
print(d)
```

```python
def make_user_list(user1: str, user2: str) -> dict[int, str]:
    user_list: dict[int,str] = {}
    user_list[0] = user1
    user_list[1] = user2
    return user_list

make_user_list("Carmine", "Dika")
```
